

A PARTNERSHIP PROPOSAL

Motoka x LagRide, Drive-to-Own Compliance

How Motoka becomes MAX.ng's compliance partner at graduation — with a referral commission for every rider handed off

Executive Summary

LagRide's Drive-to-Own programme gives Captains a vehicle through a structured ownership pathway — they earn daily income on the platform while working toward full ownership, then graduate into owning the vehicle outright. That graduation moment is a real milestone, celebrated publicly at LagRide's own Graduation events. It's also the exact point where a Captain takes on a responsibility they may not have had to think about before: keeping their own vehicle license, roadworthiness, and permits valid, on their own, with no one tracking it for them.

Motoka can pick up right where that transition happens — as LagRide's designated compliance partner, built directly into the graduation process. Every Captain who completes the Drive-to-Own programme is handed to Motoka automatically, not offered a link they may or may not use. LagRide earns a referral commission for every graduate handed off, at no operational cost beyond the initial integration.

Why Now

LagRide held its “Drive-to-Own Graduation 2.0” event in June 2026, handing vehicles to another cohort of Captains, with more graduating cohorts following in July. The programme is active and growing right now — which means every graduation event from here on is a group of new vehicle owners with no compliance partner in place yet.

The Problem, After Ownership Transfers

- A Captain who's just finished the Drive-to-Own programme is focused on their income, not on renewal dates — this is exactly when a license can quietly lapse.
- A stopped vehicle over a lapsed document is lost income for a Captain who depends on that vehicle to earn.
- LagRide's relationship with the Captain doesn't have to end at graduation — but LagRide isn't in the business of chasing renewal paperwork, and shouldn't have to be.

What Motoka Offers LagRide Graduates

- Automated reminders before a license, roadworthiness certificate, or permit expires — so it's never a surprise.
- Renewals processed through Motoka's MVAA credential and AutoReg agent network across 17 states — the Captain doesn't need to visit an office.
- A save-ahead wallet, so a Captain can set aside a little at a time instead of finding the full renewal cost in one week.
- A digital copy of every document, always available on their phone.

How the Partnership Works

1. Motoka is built into the graduation process

Instead of a referral link Captains may or may not use, Motoka becomes a step in LagRide's existing graduation workflow — handled through a simple data handoff (API, scheduled export, or a shared list, whichever fits LagRide's systems) at the point a Captain completes the Drive-to-Own programme.

2. Every graduate is enrolled automatically

The Captain's vehicle details come from LagRide directly, so there's no separate signup flow for the Captain to complete on their own. Motoka takes over document tracking and renewal from day one of ownership — covering the full graduating cohort, not just the share who'd click a link.

3. Consent, handled inside LagRide's existing paperwork

A line in the graduation agreement letting the Captain know their vehicle information will be shared with Motoka for compliance support — consistent with data-protection practice, and a one-time addition to paperwork LagRide already has.

4. Motoka pays Lagride

A one-time bonus per graduate handed off, plus an ongoing share of the renewal commission for as long as that graduate stays with Motoka — detailed below.

Proposed Referral Commission

What LagRide earns	Amount
One-time handoff bonus, per graduate enrolled through the integration	₦1,000
Ongoing override, per renewal, for as long as the driver stays with Motoka	15% of the renewal commission (~₦750 on a standard ₦5,000 renewal)

Illustrative Revenue Case for MAX.ng

A hypothetical example, not a claim about LagRide's actual graduate numbers — just to show how the commission compounds over time, assuming every graduate in the cohort is enrolled through the integration:

	Year 1 (200 graduates)	Year 2 (200 more, 400 total)
Handoff bonuses	₦200,000	₦200,000
Renewal overrides	₦150,000	₦300,000
Total to MAX.ng	₦350,000	₦500,000

Every year of graduates who keep renewing adds to the override total — this grows on its own as LagRide's Captain base grows, with no extra work required after the initial referral.

Why This Is a Good Fit for LagRide

- Full coverage, not partial — every graduate is enrolled by default through the integration, instead of relying on how many click a referral link. That means more revenue for LagRide and more graduates actually staying compliant.
- One-time integration effort, not ongoing operational work — once the handoff is set up, it runs on its own with every future graduating cohort, including the ones already following Graduation 2.0.
- A new, passive revenue line from a relationship LagRide already has and currently earns nothing further from after handover.
- Keeps the LagRide relationship going past the point of ownership transfer, instead of ending abruptly at graduation.
- Protects LagRide's reputation — a graduate who stays compliant and on the road, instead of getting pulled over for a lapsed document, reflects well on the programme that put them there.

Thank You

**Hoping to hear
from you soon**
